

1. Create a web document that contains the following text:

*The Internet*

*A network is a group of connected, communicating devices such as computers and printers. An internet (note the lowercase) is two or more networks that can communicate with each other.*

*The most notable internet is called the Internet composed of hundreds of thousands of interconnected networks.*

Use h1 for the title (the first line of text), p for text (the second lines onwards of text). Insert a horizontal rule between the h1 element and the p element. Also use styling elements to format special words using bold, italic, underline etc. Open your new document in a web browser to view the marked-up document.

2. Create a web page to display a quiz with at least 5 questions. Strictly follow the following instructions.
  - Each question should have an ordered question number and 4 options with small alphabets.
  - Also give a heading to quiz and highlight important words.
  - One question should have use of subscript and superscript elements.
  - One question should be in a program format like java, c, python etc.
3. Create a web document containing an ordered list of three items—ice cream, pizza and soft drink. Each ordered list should contain a nested, unordered list of your favourite flavours. Provide three flavours in each unordered list.
4. Create an HTML5 document that uses an image as an e-mail link. Use attribute alt to provide a description of the image and link.
5. Create an HTML5 document that contains links to your five favourite E-commerce websites. Your page should contain the heading “My Favourite Shopping Web Sites.” Click on each of these links to test your page.
6. Create a web page to display your class time table in tabular format.

7. Create a web page having 9 images arranged in 3\*3 matrixes. When a user click on any image, it should open in a new tab.
